

# Cheap and Imported Badges Are a Crime!

V&V Badges Use Silver Solder for Assembly

Unlike V&V, Imports Use Adhesives Prone to Failure

V&V Badges are Solid Alloy

Imported & Plated Badges are Not

**V&V Delivers Integrity  
All the Way Through!**

Not every badge is created equal. Take for example V&V's Departmental Badges. They're made from solid alloys. Other badges may look similar when they're new, but it doesn't take long for their thin plating to reveal its true reliability.

In contrast, behind every V&V badge you'll discover V&V's manufacturing integrity. It begins with a commitment to real value that extends much deeper than wear-prone plating. V&V's *Goldtone* and *Silvertone* alloys deliver more than a pretty face. Combined with Cloisonne hard-fired enamel, there is no more durable badge available.

Your department faces many demands. V&V's durable badges ensure that lost luster will not be counted among them.
